

Tulman Eye Group – Optomap Digital Health Exam

What is this? As an added benefit to your traditional exam, we offer a digital evaluation of your retina. Just as your dentist regularly takes pictures of your teeth, or mammograms are used for early detection, your eyes deserve the same preventative care.

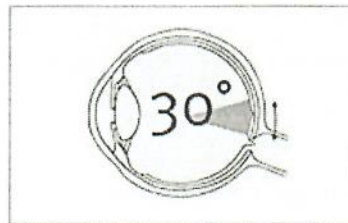

What does it do? The camera uses high tech laser scanners to scan and make a map of the inside of your eye.

Do I need it / Do I have to have it? Our Doctors believe so. Technology helps them find conditions that can't be seen with the naked eye. Now our doctors can treat you before symptoms arise.

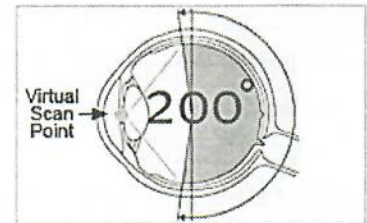

Our doctors are concerned with the overall health of your eyes not just glasses and contacts. The Optomap is used to help find and detect:

- Diabetes and Diabetic Retinopathy
- Glaucoma
- High Blood Pressure
- Retinal Detachments
- Macular Degeneration
- Eye Cancer and many other issues

A conventional nondilated Eye Exam only allows the doctor to see up to 30° of the retina.

Conventional exams

Optomap Retinal Exam

The Optomap gives a 200° view of the retina (82%).

The usual fee for this procedure is \$85. However, when done **at the same time** as your annual exam, the fee is reduced to **\$44**.

Please check the appropriate line and sign below.

- YES. I do want to have the Optomap Digital Imaging done and discuss the results with my doctor.
- NO. I do not want this medical test.
